### Our Services

We ensure that critical equipment such as syringe drivers, portable monitoring devices, or care aids are always locatable, available, and safely returnable in community settings.

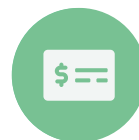

#### Cost reduction

Reduced replacement purchases and scatter losses.

#### Predictability

Greater planning reliability for equipping mobile care teams.

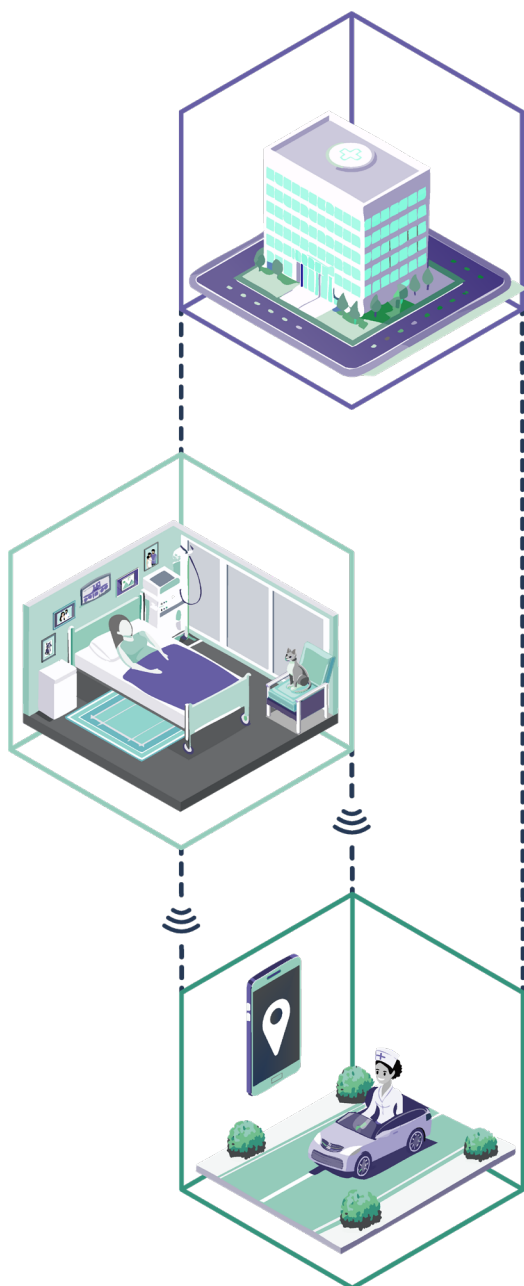

#### Affordable

A subscription-based affordable technology solution.

## Community Equipment Visibility.

As healthcare shifts into the community, Integrated Care Systems (ICS) – face a critical challenge: keeping track of medical equipment. Critical devices like syringe pumps get lost, found too late, or sit unused because they're no longer centrally managed.

**COMTRACE** directly solves this problem. We provide a smart, location-independent tracking system that makes medical devices visible in real time – whether in hospitals, care homes, or patients' homes. This saves time, money – and potentially lives.

## How **COMTRACE** works

### Our promise:

We give care facilities and mobile services back control of their medical resources – secure, digital, and scalable. By using our technology, not only are losses avoided, but patient safety is enhanced and valuable time is returned to care teams.

**COMTRACE** offers the solution:

Real-time tracking of medical devices – regardless of location

Transparent allocation of devices to specific patients or care services

Automated return processes and reminders for reuse
